We combine artificial intelligence, virtual reality and cloud computing to re-imagine how doctors test and understand vision. Eye doctors easily configure eye tests on portable VR headsets and subsequently analyze the results on a cloud platform. In the back-end, AI algorithms optimize the tests, automate assistance, control quality and provide valuable insights for clinical decisions. Our technology has been validated in clinical studies and we publish our research in peer-reviewed publications.

We authenticate and protect the identity of persons with private, traceless biometrics. We do so with our patented multi-view finger-vein biometrics because:

- They cannot be stolen, unlike public biometrics such as finger and palm prints, face, voice, iris and DNA.
- They achieve the lowest False Acceptance and False Rejection rates in biometrics.
- They achieve very high resistance to presentation attacks (spoofing).
- They require a consensual gesture for capture, making them a private functional replacement to signature, unlike public biometrics

The bloomUp Data Compass is an advanced online platform leveraging Microsoft Power BI technology for seamless management and visualisation of sustainability data. It includes modules on carbon/GHG management, Diversity, Equity and Inclusion, Biodiversity as well as an ESG self-assessment tool. Developed by industry specialists, it integrates globally recognised sustainability standards such as UN SDG, ISO, GHG, EDGE, WHO, and ADEME, as well as tailored industry benchmarks. The Compass utilises user-friendly templates for data collection and an automated validation process to check for data quality. The information is then presented in easily digestible, semi-standardised Power BI dashboards.
