# FIRE DRONE

---

## LOOKING FOR

CUSTOMERS  
INVESTORS  
PARTNERS

## FUNDING

PRE-SEED

---

## PRODUCT DESCRIPTION

The FireDrone addresses the need for safe and efficient tools in extreme temperature environments such as firefighting and industrial inspection. Traditional drones fail in these environments, exposing workers to risks such as toxic smoke, structural collapse and intense heat. The FireDrone is designed to withstand temperatures up to 200°C, enabling safe and rapid hazard detection and situational awareness. It enables users to increase safety, reduce downtime, and minimize environmental impact.

## PRODUCT DESCRIPTION

What if your technology could feel what you feel? Ovomind is a Swiss DeepTech plug-in that makes any product emotionally aware, fully compatible with all major wearables. It translates real-time biometric signals (PPG, GSR, and skin temperature) and feeds emotional intelligence directly into your systems. From gaming and automotive to health, wellness and human performance, Ovomind is the layer that gives AI its most important missing sense: empathy.

Energy-efficient emotion recognition.

CSEM's MOODY device, powered by a small coin cell battery, recognizes human emotions using minimal power. Its special image sensor, AI co-processor, and optimized software make it ideal for smart home devices, security systems, and car safety features. MOODY shows that even demanding tasks such as emotion detection can be handled efficiently with the right components and software, making machines smarter and more energy efficient. This innovation is promising for the future of sustainable electronics.
